ANAKIN SKYWALKER'S PODRACER

32 BBY POD2

VEHICLES

"YOU'VE BEEN WORKING ON THAT THING FOR YEARS!"

ANAKIN SKYWALKER'S PODRACER

ANAKIN SKYWALKER WON THE BOONTA EVE CLASSIC ON TATOOINE IN THIS IMPRESSIVE HOT-ROD

MANY of the Podracer's parts came from the scrapheaps and wrecks that littered the Mos Espa landscape and racetracks around the city. Skywalker scrounged other components from his Toydarian master, Watto. Despite its ramshackle appearance, the racer was anything but the collection of junk it initially appeared. Constructed by the nine-year-old slave boy in his mother's yard, the Podracer was an exceptionally powerful racing vehicle.

ANAKIN'S LUCK: Like most Podracers, Anakin has his own personal racing badge. Many racers choose graphics that they believe will bring them good luck, but Anakin's is simply a stylized letter A.

TYCARRONS AND TUBES: Skywalker's precocious technical skill allowed him to come up with a clever new design of fuel intakes. Together with multiple igniters, this was capable of injecting more fuel mixture into the engines than normal, boosting the thrust they generated. Skywalker's modifications ensured that every drop of liquid fuel turned into pure speed, but because of the nature of his engine adjustments the two Rodon-Ulzer B20LS flooded quite easily and sometimes malfunctioned. The vehicle's telemetry computers had to monitor the temperature and pressure algorithms to maintain a delicate balance, leaving Anakin to concentrate on controlling the race.

YUWATER-BORN: Like most Podracers, Skywalker's vehicle had two powerful repulsor engines connected by Steethon control cables to the small, chaotic-style Pod. But unlike most racers, he had built his vehicle for efficiency rather than brute power.

A LUCKY SCOURG: Anakin Skywalker painted his racer from a small cockpit in the Pod that trailed behind the two massive engines. The Pod was a little over three metres in length and was open to the air, with only a curved windscreen to deflect the dust and sand kicked up by high-speed racing. Its cockpit housed all the controls for the Podracer, handling the engine temperature and igniter switches on the dashboard, and guiding the Steethon control cables through two shabby piloting yokes. The cockpit was mostly unpainted, showing off the bright silver metal of its frame, although C-3PO arranged for R2-D2 to paint a series of vertical blue stripes and add Anakin's X-shaped pennant symbol to the front.

RODON-ULZER B20LS BURNING ENGINE: The racer used two Rodon-Ulzer B20LS engines, which the young boy had stripped down, rebuilt and reconfigured. Each engine measured 7 metres in length and, at full throttle, these two units produced enough thrust to get the racer up to speeds of over 947 kph, making it the fastest Podracer on the circuit.

ENERGY BEAMS: A high-power energy beam was generated between two binder plates between the engines. The discharge was powerful but not deadly – any organic creature that came into contact with the beam was numbed for hours.

AIR SCOOPS: Around each engine intake were three long scoops, painted yellow to make the small Podracer stand out. They increased manoeuvrability, allowing the craft to race at full throttle even in tight corners, and were actually modified Teyren hydraulic struts that Anakin found in a consignment of military surplus parts.

VEHICLE SPECIFICATION

DESIGN:	ANAKIN SKYWALKER
LENGTH:	7 METRES (ENGINE)
SPEED:	947 KPH

Labels in diagrams: Steethon Control Cable, Thrust Stabilizer Cone, Air Scoops, Control Pod, Primary Intake Turbine, Turbine, Pilot Seat, Energy Binder Plate, Spill Air Doors, Triple Air Scoops.

It's a bit late now that all the droids are dead!Use the Central Command Console and and run the "shut down" program on the Power Distribution system.. There's an Airspeeder here that is currently not operational Once you find all the parts you'll be able to fast travel between different locations on Nar Shaddaa.. 4) Pylon 3 – Head here for the Bith Scientists quest (#3) Search the container here for the Maneuvering Flaps, another piece of the Airspeeder.. You can find all the digging sites in this guide for armor Unlike the armor sets, there are no specific planets for each of the parts.

swtor kotor speeder

You can help them out by dealing with either or both of these groups If you are going for DS points persuade Hussef that they are doomed and the Exchange boss, Saquesh, will give you a good reward.. Unlike the armor sets, digging for speeder parts do not require you to have completed the seeker droid quest line.. 7) Exchange Boss – A deal with an Exchange Boss has gone wrong Once you enter the room they'll turn on you.

kotor 2 speeder power cell

Aaida – She is looking for her partner Lootra If you have been to the docks you'll know that he's still alive.. You can dance yourself, or the Handmaiden will dance as well if she is in your party.. 6) Vogga's Storage – You'll come here with the T3-M4 droid after visiting the Jekk'Jekk Tarr.. Jekk'Jekk Tarr?. 6) Oondar the Bad Merchant – Oondar is in competition with Geeda on the other side of this area #8.. 5) The Ebon Hawk Owner? – Yes, that's right A man by the name of Ratrin Vhek will claim to be the owner of the Ebon Hawk.. Once you have the deal set up you'll need to talk to Lt Grenn in the Entertainment 081 area of the Telos Station. e10c415e6f
